## SUMMARY

Agentic AI Engineer with 3+ years building AI systems that automate complex, document-heavy workflows at enterprise scale. Specializes in multi-agent architectures, LangGraph orchestration, and RAG pipelines for turning manual, multi-step processes into reliable production-grade agentic systems on Azure OpenAI and Copilot Studio.

## SKILLS

- **Agentic AI:** Multi-Agent Architectures, LangGraph, ReAct Reasoning, Task Decomposition, Parallel Tool Calling, State Management, Model Context Protocol, LLM Orchestration, Human-in-the-Loop Design, LangSmith
- **Generative AI:** RAG Pipelines, Azure OpenAI, Microsoft Copilot Studio, Prompt Engineering, Structured Output Design (JSON schemas), LLM Threat Modeling, Model Evaluation, LangChain
- **Programming / Scripting:** Python, FastAPI, REST APIs, SQL, PySpark, DAX, Power Query
- **Data Engineering & Visualization:** Azure Databricks, Power BI, Azure Data Factory, ETL Pipelines
- **Cloud & DevOps:** Azure (Blob Storage, Web Apps, Monitor, Repos, Entra ID), Power Automate, CI/CD

## EXPERIENCE

### Cognizant Technology Solutions

AI Engineer

Sep 2023 – Present

- **Agentic AI Systems:** Designed and shipped stateful multi-agent workflows using LangGraph on orchestrator-workers pattern, ReAct reasoning loops, task decomposition, parallel tool calling via `asyncio.gather`, and conditional routing via typed state graphs.
- **RAG & Retrieval:** Built RAG pipelines with Azure OpenAI and Azure AI Search having hybrid retrieval, chunking strategies, and query enrichment LLMs to improve factual accuracy and answer relevance across diverse query types.
- **Observability & Reliability:** Monitored agent runs via LangSmith. Applied LLM threat modelling, structured JSON contracts at agent boundaries, and max iteration limits to prevent error propagation across multi-step pipelines.
- **Client Interaction:** Collaborated with global stakeholders for requirement gathering, solution design, demos, and post-production monitoring.

AI Intern

Mar 2023 – Jul 2023

## PROJECTS

### Agentic Knowledge Management Platform (LangGraph Orchestration)

Tech: LangGraph, Azure OpenAI, Azure AI Search, Databricks, ADF, Azure Web Apps, Entra ID

- Rebuilt a GenAI knowledge platform (50K+ documents) as a stateful LangGraph graph with typed `QueryState` for session-aware enrichment node, router node with conditional edges to specialist workers: factual (5-chunk RAG), summarization (40-chunk RAG), and aggregation (NL2SQL → DB execution).
- Added parallel tool calling via `asyncio.gather` for hybrid SQL + RAG queries; results merged into shared state before synthesis. Reduced search time by 60%, knowledge reuse by 40%. Integrated RBAC, CI/CD, and Azure Monitor observability.

### Multi-Country Funding Compliance & Report Generation System

Tech: Microsoft Copilot Studio, Azure OpenAI, SharePoint, Power Automate, Power Apps

- Built a human-in-the-loop compliance system across 95 countries where an orchestrator agent surfaces 23 questions per submission, each retrieving its document set from a 19-document knowledge base and running a dedicated reasoning agent. Reduced review time by ~60%, saving 95+ person-days per quarter.
- Engineered a 9-agent report generation pipeline where each child agent generates HTML for one section independently, feeding a consolidation step that produces the final PDF; cut report drafting from days to under an hour.

### AI-Driven Complaint Screening System (Agentic Pipeline)

Tech: LangGraph, Azure OpenAI, Azure AI Search, Python, Azure Web Apps, Databricks

- Designed a stateful 3-node LangGraph pipeline (Extraction → Classification → Reporting) for automated OIG complaint screening, with a typed `ScreeningState` schema shared across all nodes.
- Orchestrator LLM dynamically assessed complaints against organization mandate via grounded retrieval, routing to report generation on pass or human review on fail via conditional edges. Monitored via LangSmith.
- Reduced screening time by 70–80%, improved classification consistency by ~60%, and cut RFI/Closure drafting effort by 50%.

## CERTIFICATIONS

- Microsoft Certified: Azure AI Engineer Associate (AI-102)
- Microsoft Certified: Azure Data Scientist Associate (DP-100)
- Databricks Generative AI Engineer Associate
- Google Cloud Certified: Generative AI Leader
- Databricks Certified Data Engineer Associate
- Microsoft Certified: Power BI Data Analyst Associate (PL-300)

## EDUCATION

Galgotias College of Engineering and Technology

B.Tech – Electrical and Electronics Engineering | SGPA: 8.51

Greater Noida, India

July 2019 – June 2023
